

# Donate to **SAVE A SEED**

**BE PART OF A FOOD SECURE FUTURE**

CIMMYT's seed bank has the science to unlock useful traits for new maize and wheat varieties that will help farmers to thrive despite the threats of climate change and scarce resources.

Our collection of over 175,000 unique maize and wheat samples are freely available to breeders and other researchers around the world. The collection includes heirloom varieties and wild relatives of maize

and wheat no longer grown, which would otherwise be lost.

All those varieties were domesticated over millennia by farmers to create the crops grown today. Every seed in our bank tells a story of human resilience, adaptation and achievement. Any one of them could help secure the food of our future.

It currently costs CIMMYT more than \$2 million each year to maintain the seed collection. We gratefully

acknowledge the support of generous donors who have made this possible for many years. But costs are rising and we need you!

By donating to save a seed you play a part in creating a food secure future.

Join us in helping farmers reach global food security and donate to save a seed at:
