

# AP02 - Exploring genetic diversity for harvest index and identifying improved selection approaches

Gemma Molero, Sivakumar Sukumaran,  
Francisco Piñera, Carolina Rivera-Amado and  
Matthew P. Reynolds

# RESEARCH TARGETS

The overarching goal of this project is to identify genetic resources with **promising expression of HI** and related traits and development of **improved screening protocols**

- i. Screen a diverse set of genetic resources for **good expression of HI**, Fruiting efficiency, Spike Partitioning index and length of stem internodes 2 and 3 (N-IWYP700)
- ii. Study of **phenological patterns** to identify promising new sources of diversity for pre-breeding
- iii. Identify lines with particular constellations of **Ppd, Vrn, Eps, and Rht alleles** that are associated with favorable expression of HI levels (IWYP25) and **molecular markers** associated with HI and partitioning traits (N-IWYP700, IWYP64).

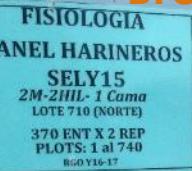

# MAIN PANELS STUDIED

## High Biomass Association Mapping Panel, HiBAP (150)

Favorable expression of biomass RUE based on systematic screening of genetic resources under fully irrigated conditions

## Bread Wheat Diversity Panel (390)

Assembled after screening ~70,000 lines for heat and drought adaption

## Primary synthetic panel (160)

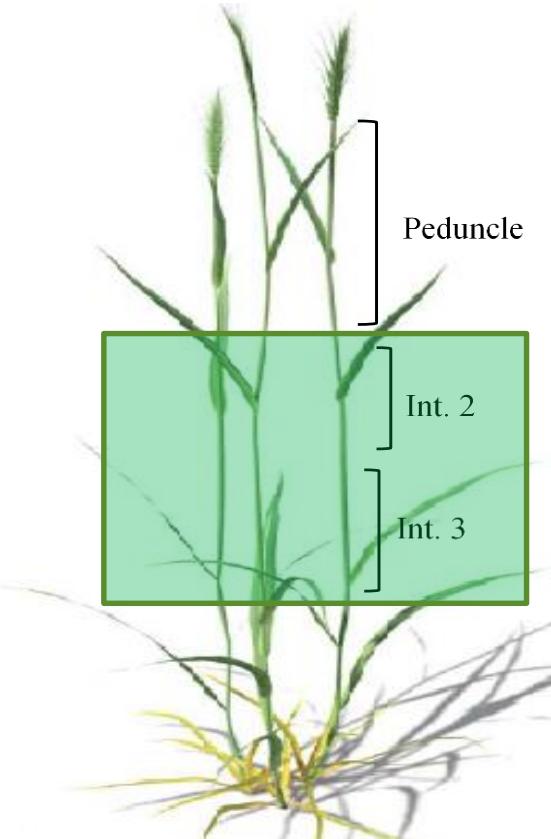

Selected from 2,000 lines brand new hexaploid genomes for adaptation to heat, drought & favorable conditions

## Durum Wheat diversity Panel (225)

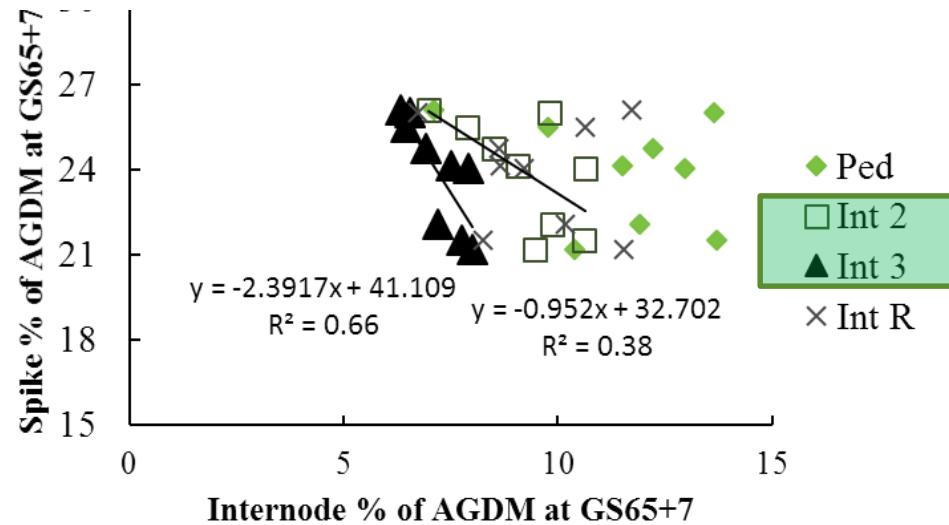

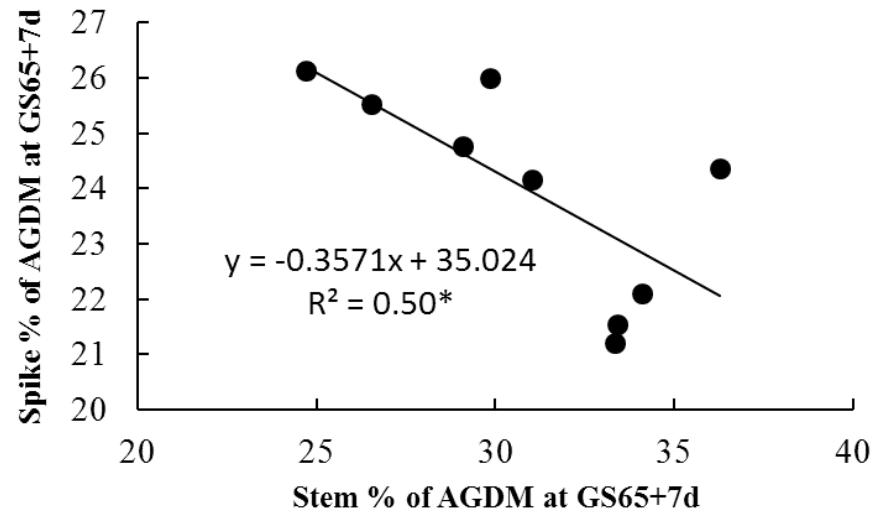

Assembled after screening ~70,000 lines for heat and drought adaption

# i. Screen a diverse set of genetic resources for good expression of HI, Fruiting efficiency, Spike Partitioning index and length of stem internodes 2 and 3

**Negative associations  
with spike growth**

# i. Screen a diverse set of genetic resources for good expression of HI, Fruiting efficiency, Spike Partitioning index and length of stem internodes 2 and 3

Phenotypic screening of elite genetic resources to identify diversity for HI and related traits

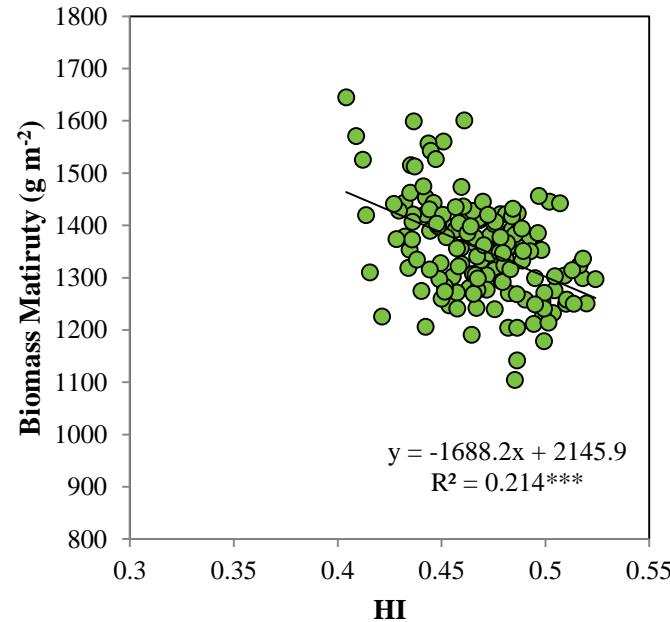

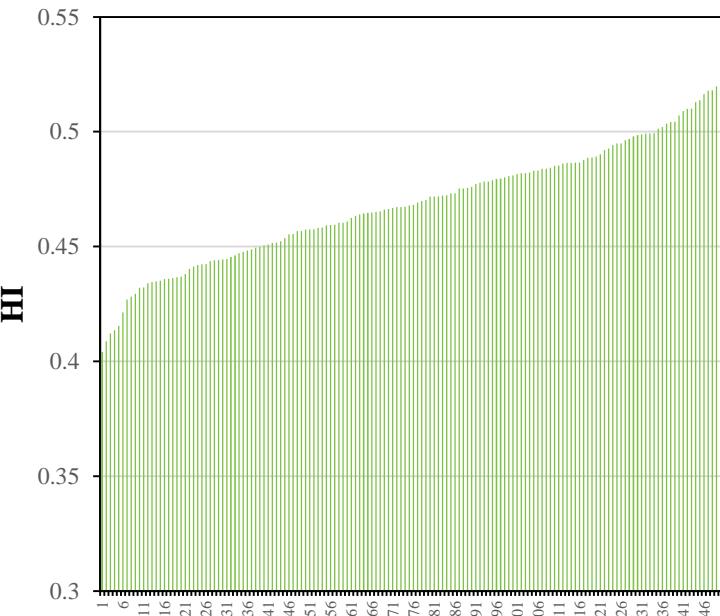

<b>HiBAP (n=150) 2 years</b>
<b>SynPan (n=160) 2 years</b>
<b>BWDIV (n=370) 2 years</b>
<b>DWDIV (n=225)</b>

> 2,000 lines from different panels have been phenotyped for harvest index and other partitioning traits since 2016

# Large genetic variation in HI in elite population; trade off with biomass

HiBAP, 2 years

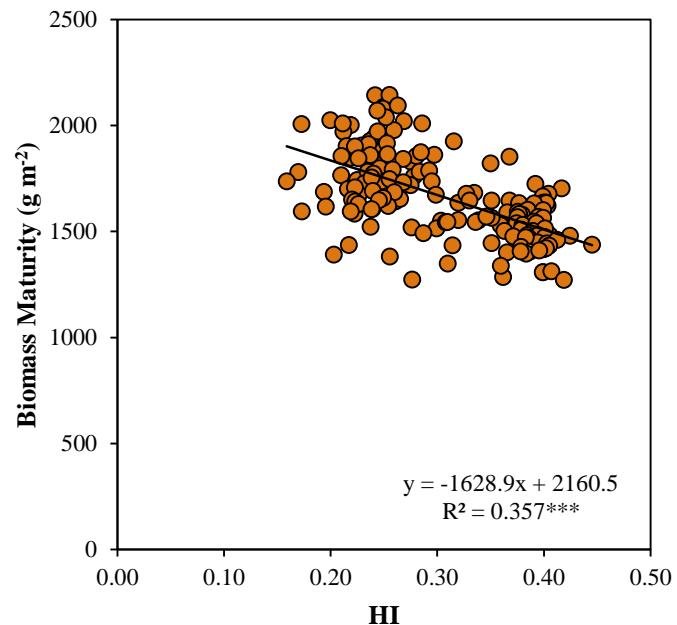

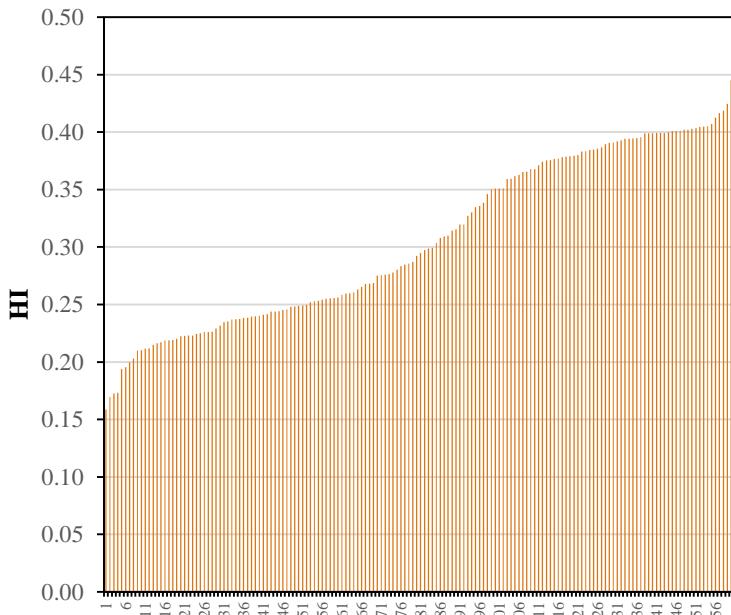

HiBAP, Combined analysis 2015-2016 & 2016-2017

# Large genetic variation in HI in Primary Synthetics; trade off with biomass

SynPan, 2 years

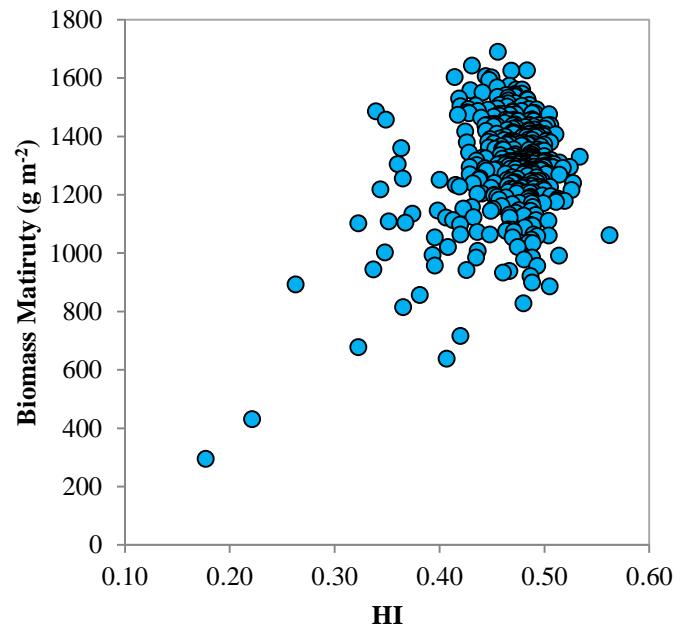

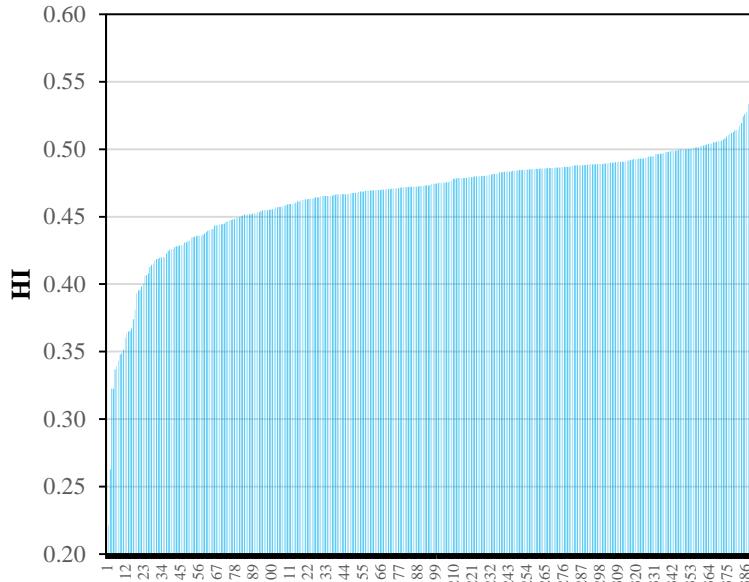

SynPan, Combined analysis 2015-2016 & 2016-2017

# Large genetic variation in HI in BW diversity Panel; no trade off with biomass

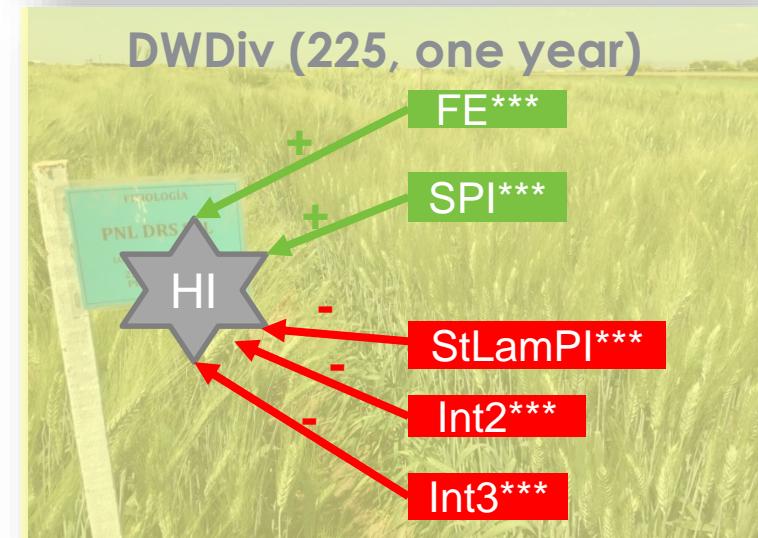

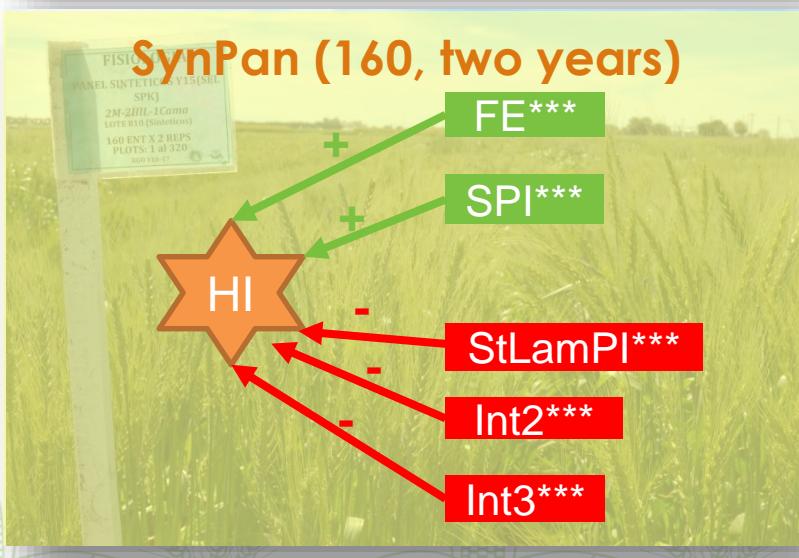

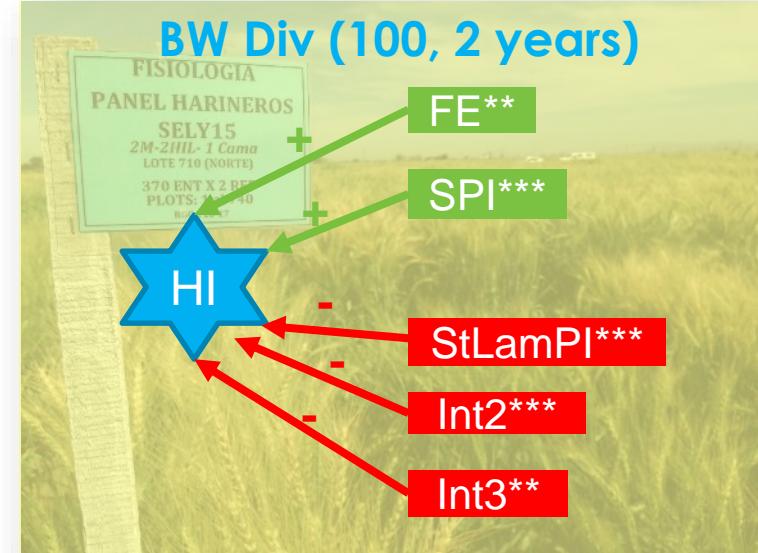

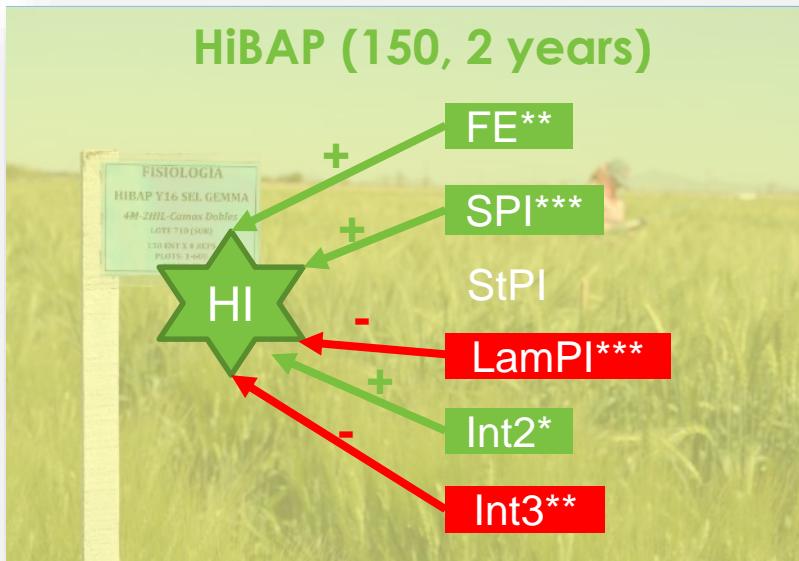

BWDiv, 2 years

BWDiv, Combined analysis 2015-2016 & 2016-2017, 390

# Fruiting efficiency (# grains/spike dry wt), and Spike partitioning index (SPI) correlate with HI; Investment in Lamina and Internodes 2&3 negatively correlated

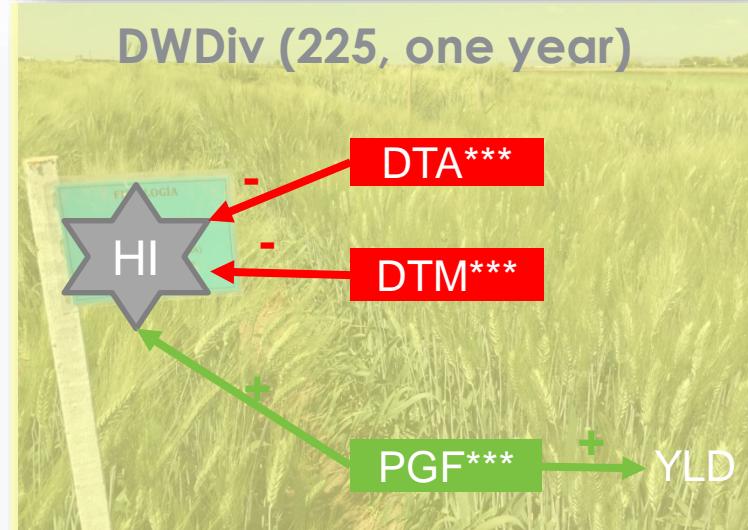

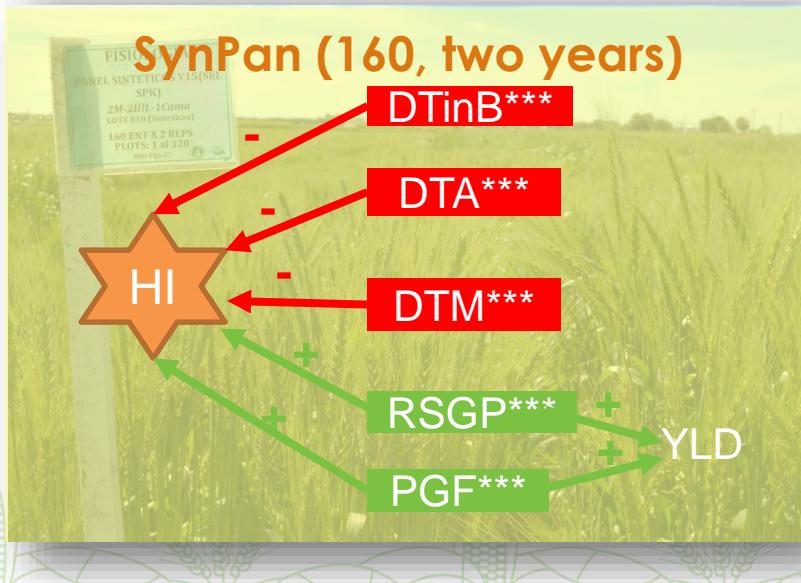

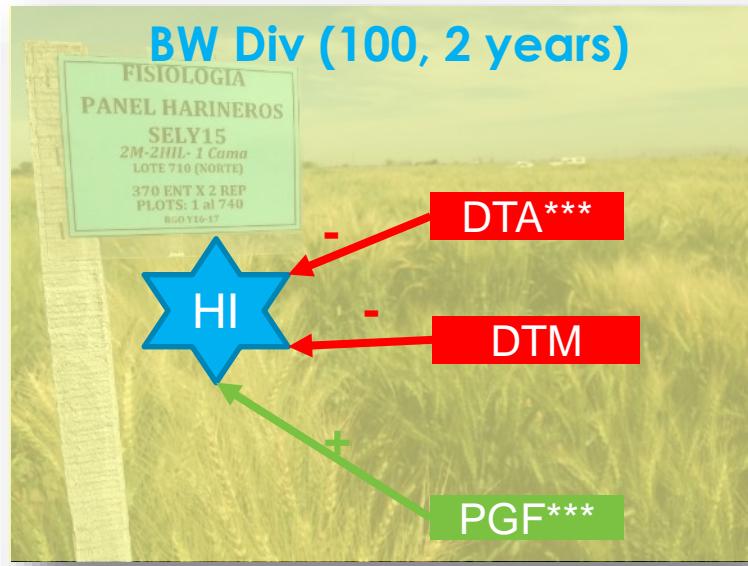

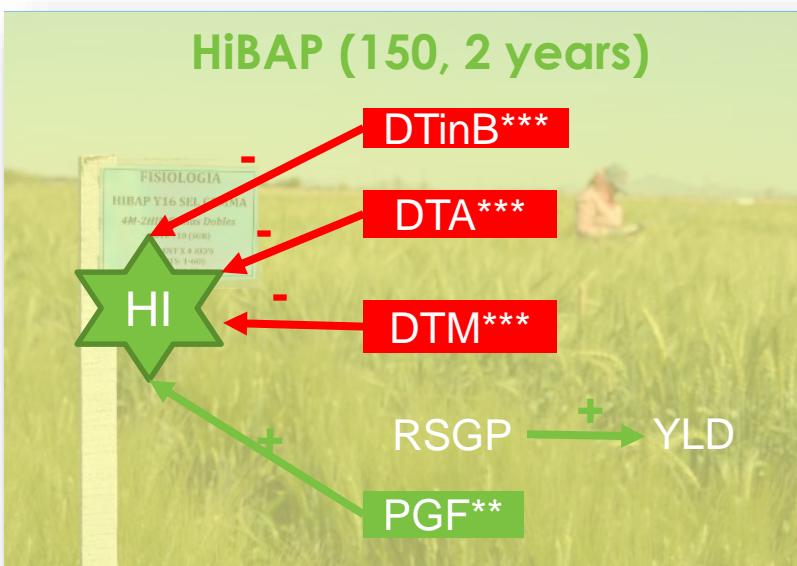

## **ii. Study of phenological patterns to identify promising new sources of diversity for pre-breeding**

Flowering time and phenological patterns including relative duration of:

- Rapid spike growth phase (RSGP): from initiation of booting to anthesis
- Grainfilling phase (PGF): from anthesis to physiological maturity

# Duration of grain filling period correlates with HI

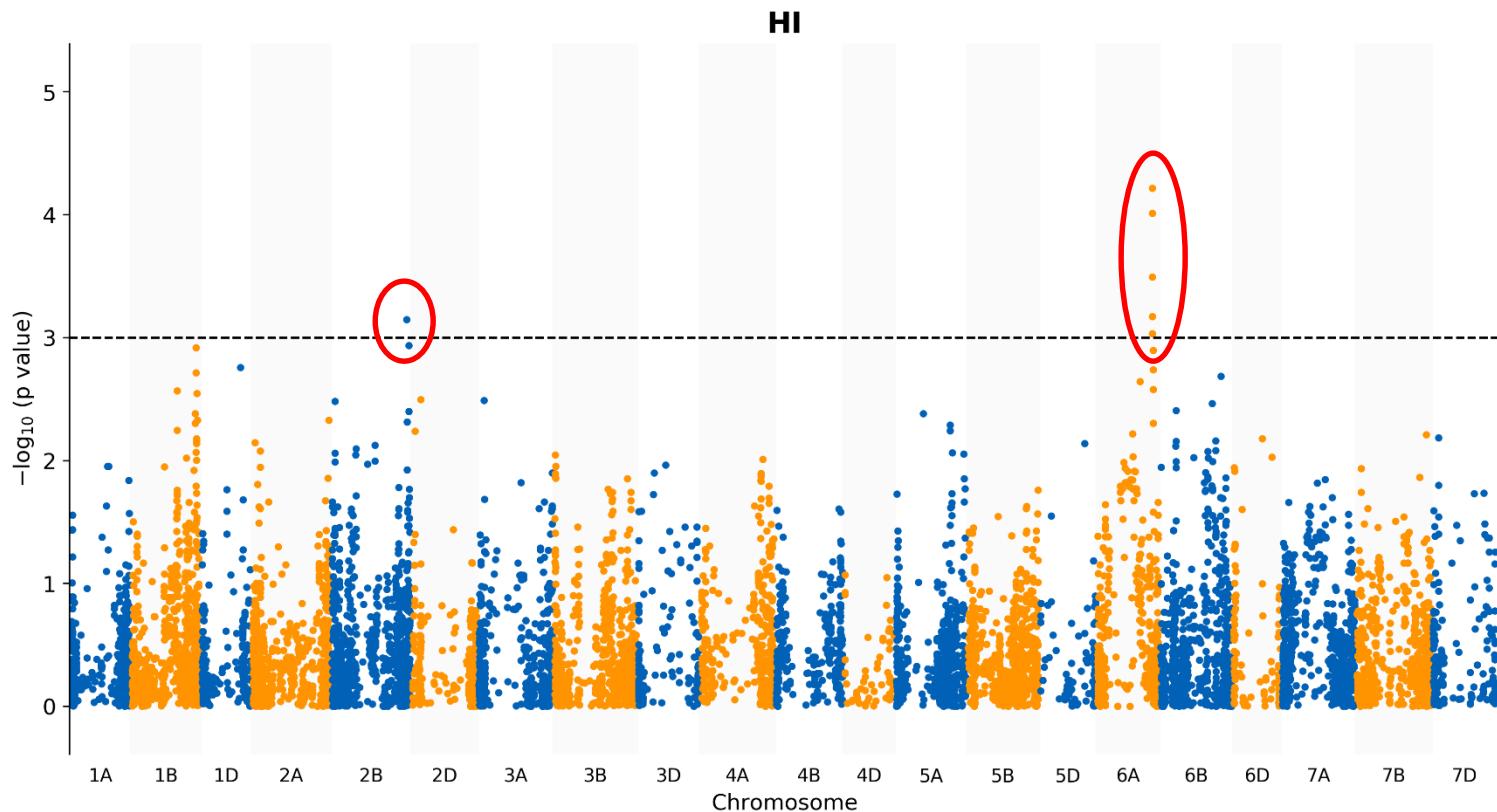

### iii. Identify lines with particular constellations of *Ppd*, *Vrn*, *Eps*, and *Rht* alleles that are associated with favorable expression of HI levels (IWYP25)

The Major genes and its alleles scored on the panels

Gene/Allele	Marker	Description
<b>Rht-B1</b>	Rht-B1_SNP	C:C - Rht-B1a; T:T - Rht-B1b
<b>Ppd-A1</b>	GS105-1117ID	Ins: wildtype; Del: Ppd-A1 (GS105)
<b>Ppd-A1</b>	Cdex5-6ID	wt: Ppd-A1 (CD) sensitive-null
<b>Ppd-B1</b>	TaPpdBJ003	null: Ppd-Bb; A:A - Ppd-B1a(3x)
<b>TaPpdDD001</b>	TaPpdDD001	-:- : Ppd-D1a; Ins: Ppd-D1b
<b>Ppd-D1</b>	TaPpdDI001	Ins:Ppd-D1 (M) sensitive
<b>Vrn-A1_9K0001</b>	Vrn-A1_9K0001	G:G- Vrn-A1a; A:A- vrn-A1
<b>Vrn-A1</b>	Exon7_C/T_Vrn-A1	T:T (vrn-A1(ex7) Veery allele
<b>Vrn-B1a</b>	Vrn-B1a	Vrn-B1a, Vrn-B1b, Vrn-B1c, vrm-B1
<b>Vrn-D1-D1a_A</b>	Vrn-D1-D1a_A	C:C: Vrn-D1a; G:G: vrn-D1
<b>Vrn-D3</b>	Vrn-D3F6/R8	Vrn-D3a, vrn-D3
<b>TaFT3</b>	TaFT3-B1_Kasp1	VIC: Rialto type
<b>TaFT3-D1</b>	FT3-Exon4_A/G	G:G: Rialto type, A:A: Spark type
<b>Eps-D1</b>	TaBradi2g14790	Ins: Rialto type, Del: Savannah type
<b>Eps-D1</b>	TaMOT1-D1	Ins: Rialto type, Del: Savannah type
<b>TaTOE1-B</b>	TaTOE1-B1_KASP1	Fam: Avalon type, VIC: Cadenza type, NA: Rialto

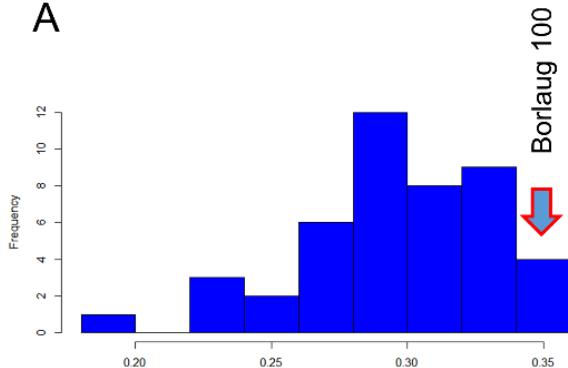

### iii. Identify molecular markers associated with HI and partitioning traits (IWYP64)

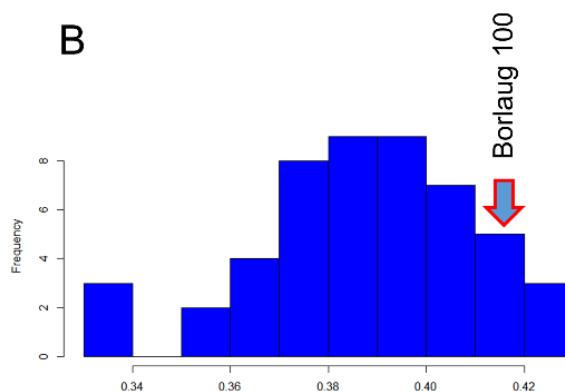

Trait	SNP_ID	Chromosome	Position_(bp)	p-Value	Effect
HI	AX-94728242	2B	7.64E+08	0.00072	0.08
	AX-94546552	6A	5.58E+08	0.00006	0.12

# HI of WCYT international nurseries + its parents (A) 1<sup>st</sup> WCYT (2) 2<sup>nd</sup> WCYT and (3) 3<sup>rd</sup> WCYT

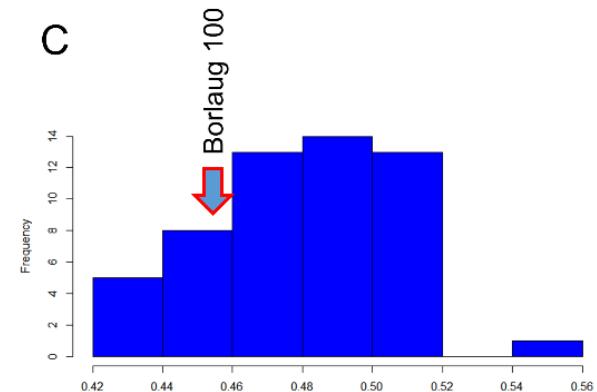

A

B

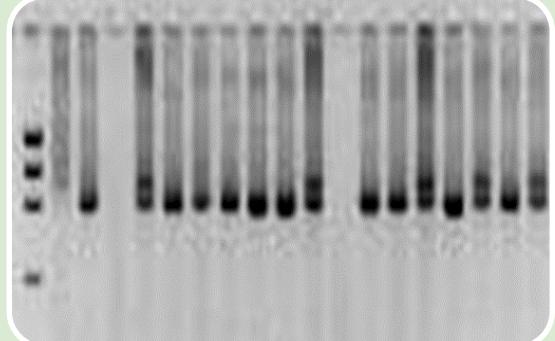

C

Sukumaran et al, unpublished data

# Outputs

## i. Phenotyping

- >2,000 lines screened (**N-IWYP700**)
  - Identification of outstanding lines
    - Mol. Markers identified for HI (2), FE (3), LamPI (3), SPI (2), StPI(4), Int3L (2) (**IWYP64 & N-IWYP700**)
    - Strategic crosses (**IWYP-HUB**)

## ii. Pheno patterns

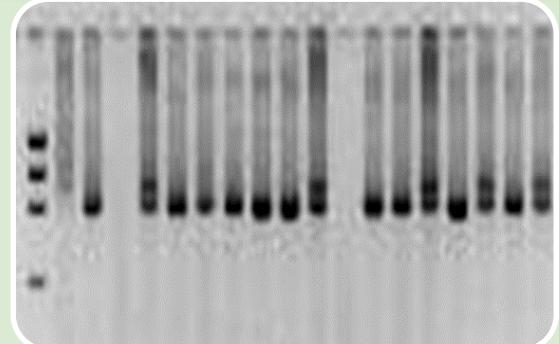

- > 2,000 lines screened ((**IWYP64, IWYP60**)
  - Mol. Markers DTA (5), RSGP (4), PGF (4) (**IWYP64**)
  - Strategic crosses (**IWYP-HUB**)

## iii. Genetic analysis

- Linked with IWYP25 for mayor genes
  - Linked with N-IWYP700/IWYP64

# Next steps

## i. Phenotyping

- ~1,800 lines screened for HI: HiBAP II, New SynPan, hybrids, Canopy Aus (**AP05IWYP**), etc.
- Identification of new outstanding lines
- New Strategic crosses Y18-19 (**IWYP-HUB**)

## ii. Pheno patterns

- New Panel: HiBAP II, New SynPan, hybrids, Canopy Aus, etc.
- Identification of new outstanding lines
  - New Strategic crosses Y18-19 (**IWYP-HUB**)

## iii. Genetic analysis

- Novel mayor genes combinations for maximum HI
  - Identify other sources of variation for HI and partitioning traits

# Acknowledgements

- · What are the research target(s)
- · Brief summary of the technical approaches taken (or incorporate where sensible)
- · Results to date, expected further results
- · How these results and research outputs should be applied and delivered for practical impact
- · Status - e.g., have any of the discoveries/outputs been transferred to the IWYP Hub, taken up by private industry, used in other projects, etc.
- · Next steps
- This should give you an idea of what we are looking for, i.e., less of a seminar/learning conference and more of a results driven team workshop focused on implementation to get practical results turned into delivered and applied products.
