*IITA – Ibadan, Nigeria

Maize Novel Tools and Germplasm

- **Vision:** To improve input use efficiency and reduce production risk of small holder maize farming systems by **enhancing the rate of genetic gain** for economically important traits through the application of innovative technology and novel germplasm

MAIZE CRP CoA 2.2 Organization

- 2.2.1 – DH cost reduction
- 2.2.2 – Forward Breeding applications (Deployment)
- 2.2.3 – Trait Pipeline (Discovery and Validation)
- 2.2.4 – Genomic Selection

MAIZE CRP CoA 2.2 Organization

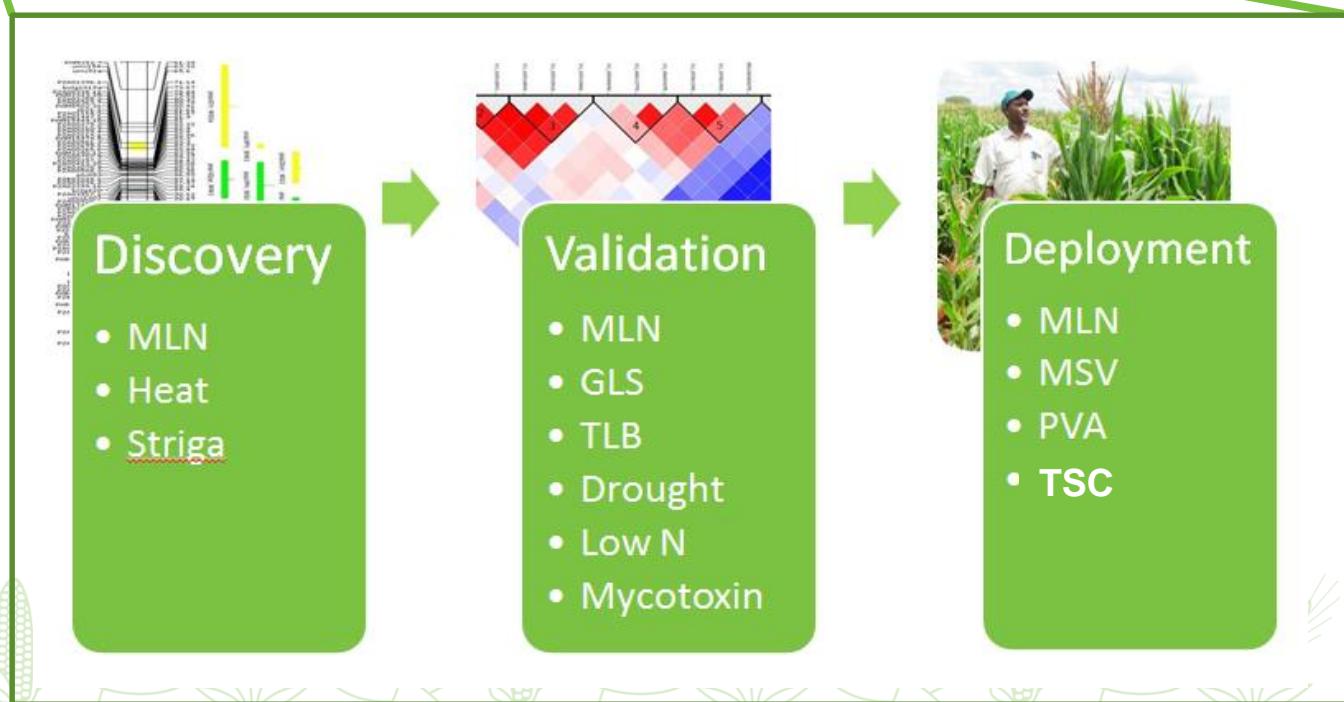

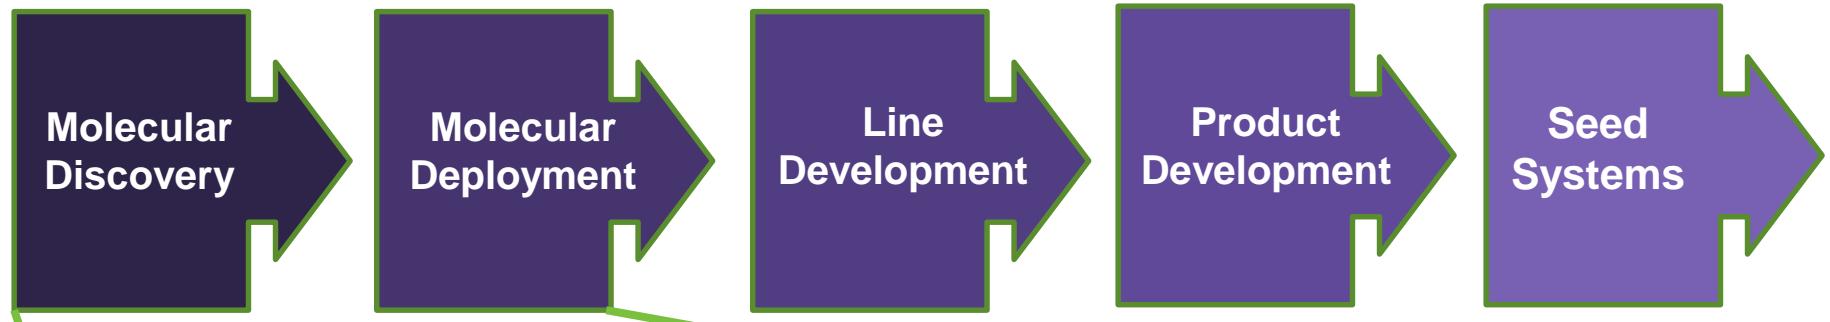

- 2.2.3 – Trait Pipeline (Discovery and Validation)
- Trait teams Strategic teams

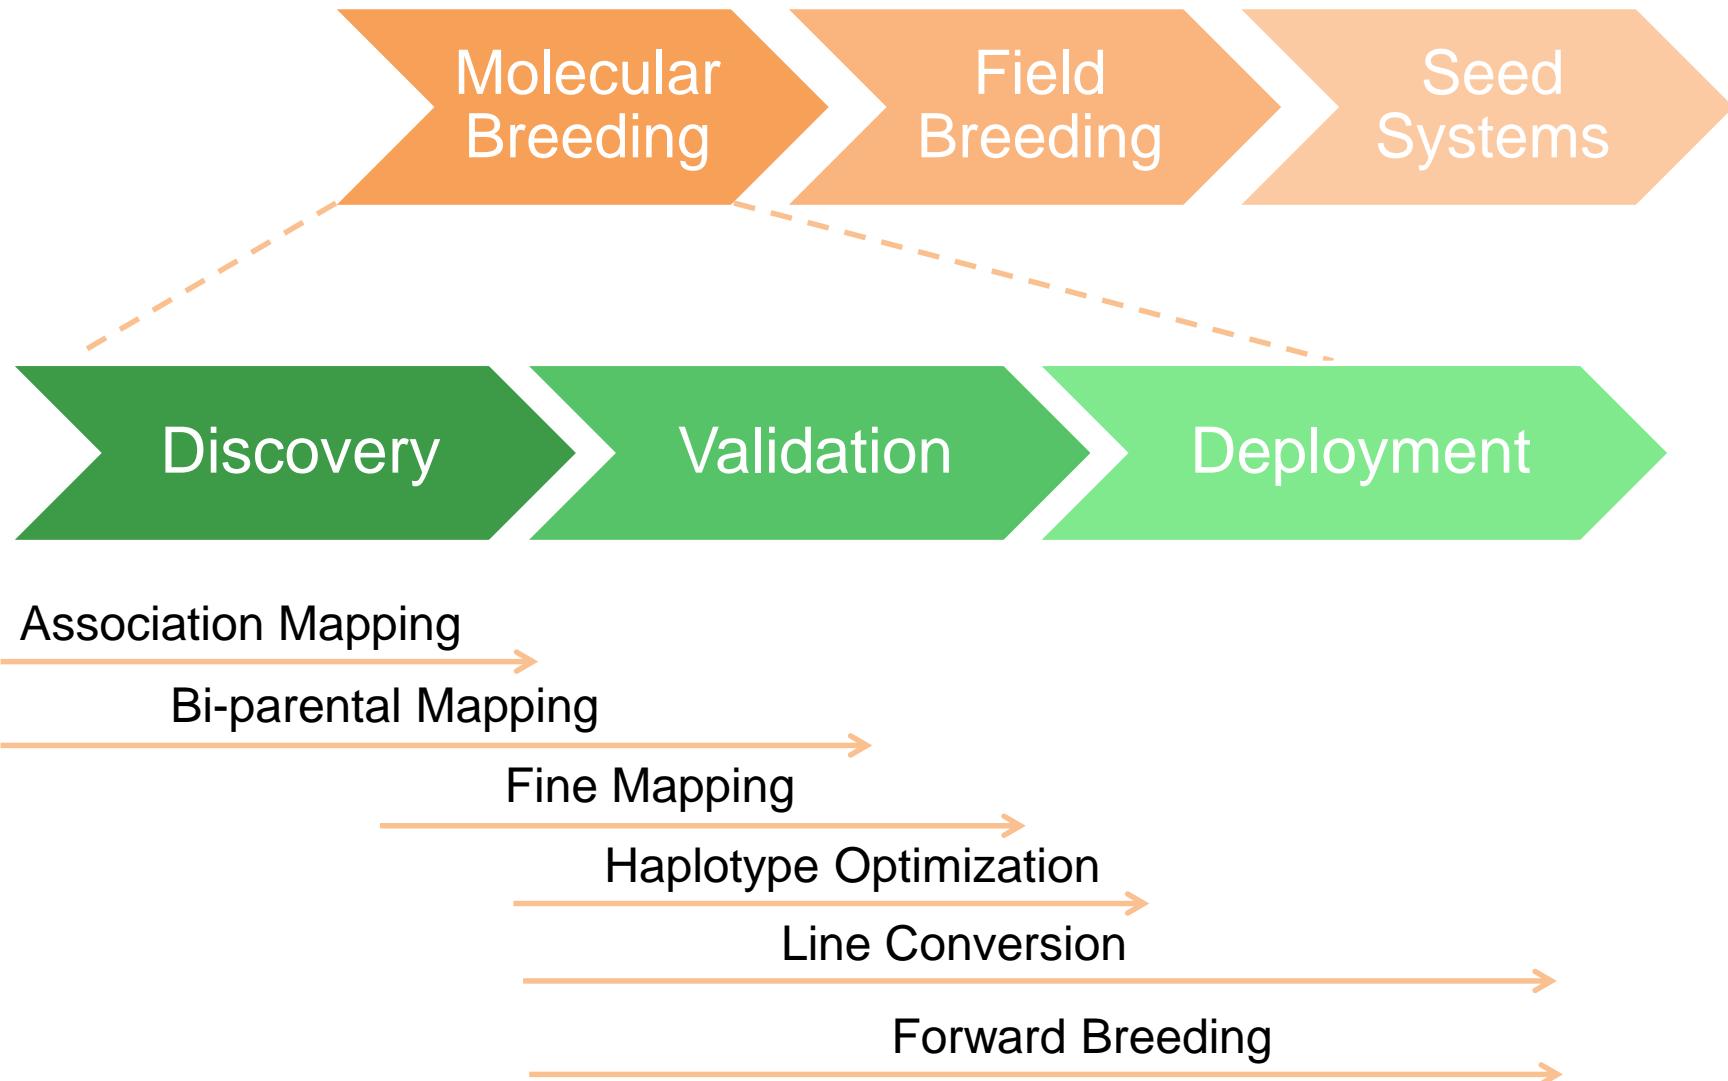

Priority 1	Priority 2	Priority 3
TSC	TLB	BLSB
MLN	GLS	PFSR
MSV	Low P	DM
PVA	Low N	QPM
Zinc	Acid Soil	CMS
Striga	Drought	CSC
Aflatoxin	Heat	Waterlogging
(Ms44)	Temperate Introgression	Herbicide susceptibility
FAW		Highland Adaptation

- QA/QC
- Genomic Selection

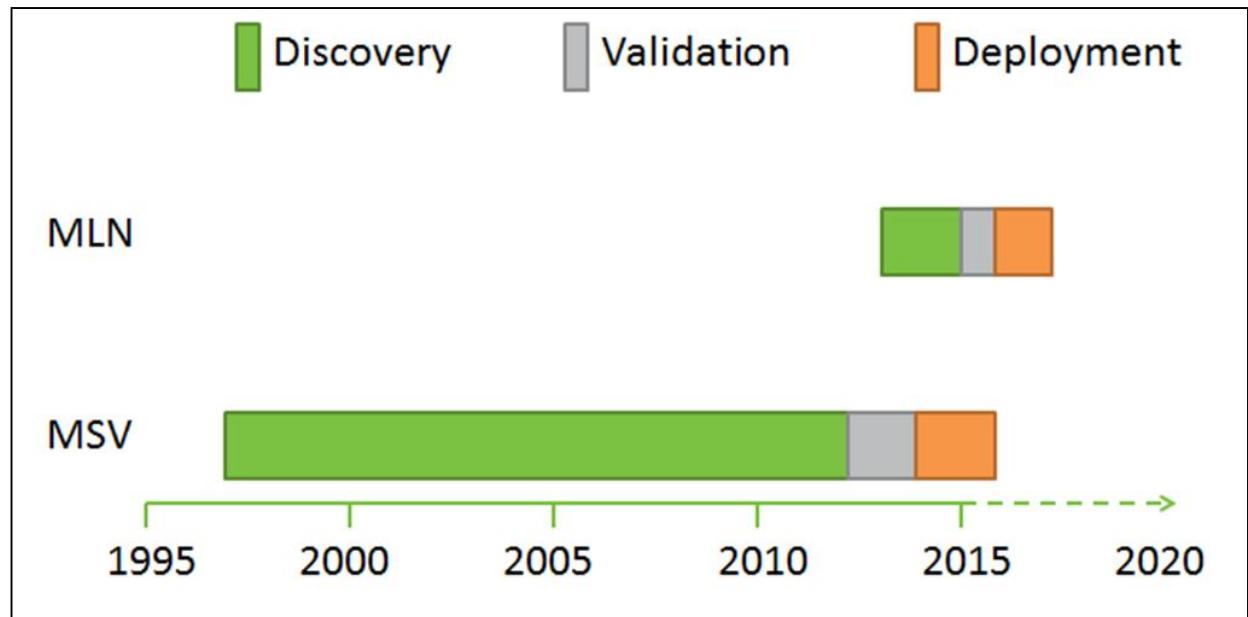

Global Trait Pipeline

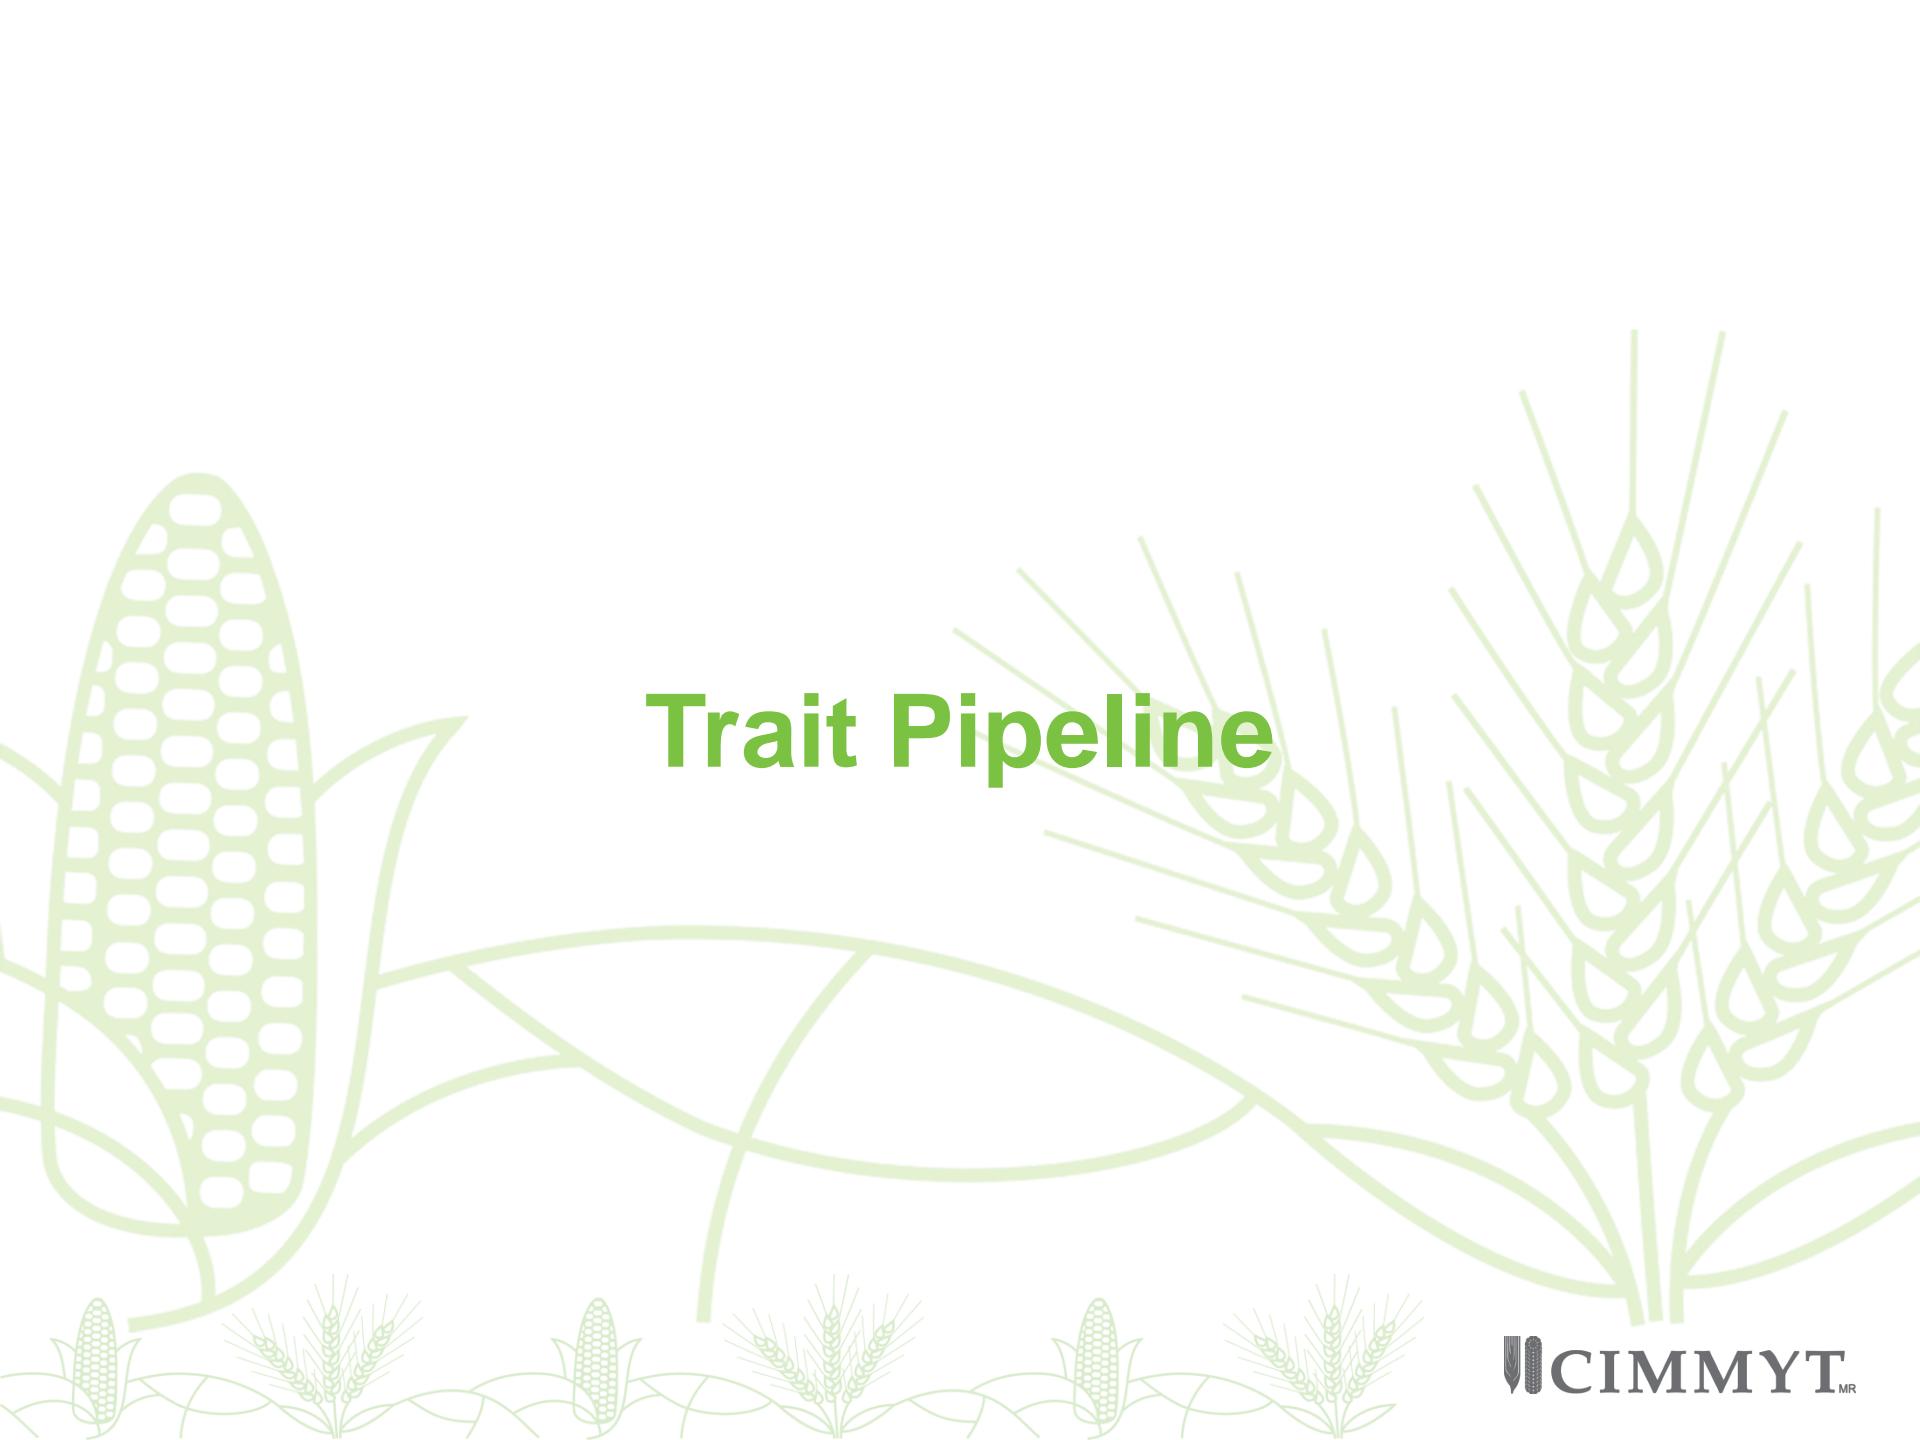

Critical Path Analysis

- Optimization of discovery to deployment pipeline
- Focus on critically time-sensitive steps
- Role specialization to improve efficiency at bottlenecks
- Integration with breeding workflows

Trait Pipeline

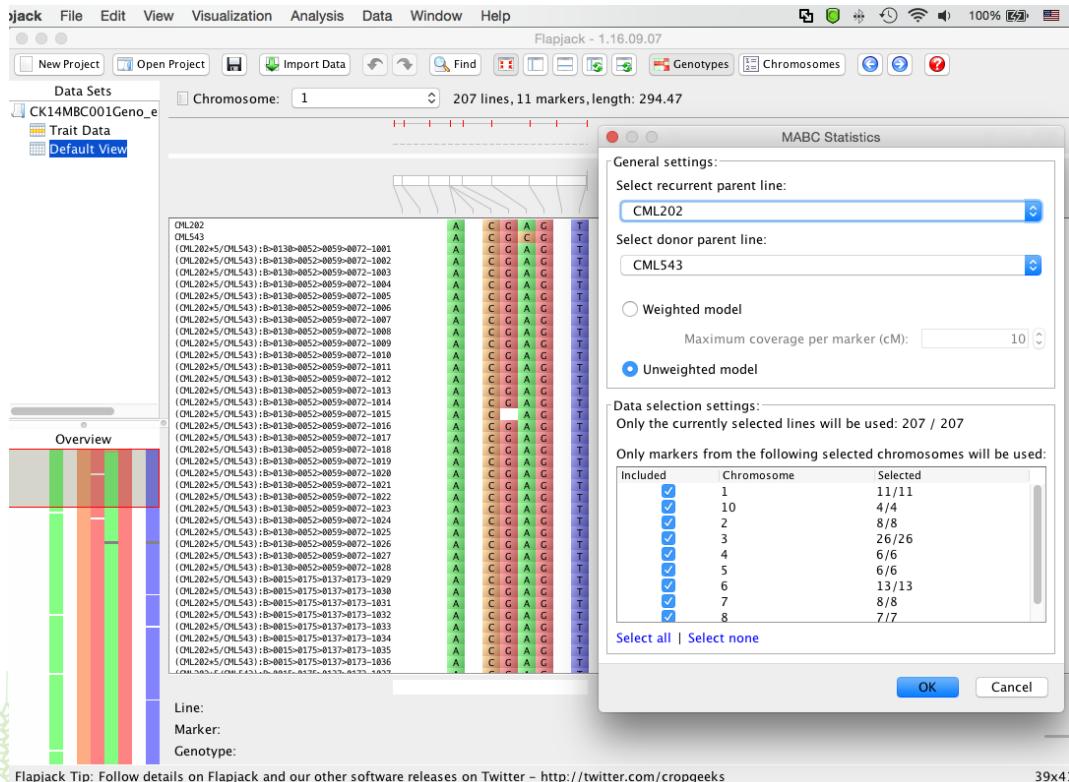

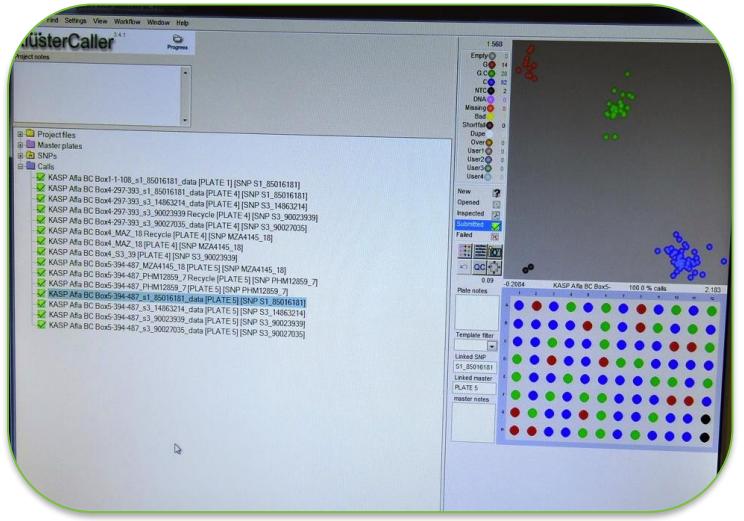

Aflatoxin resistance

➤ Validated haplotypes from Mississippi State Univ. (M. Warburton) being evaluated for efficacy in Africa

➤ Marker-assisted backcrossing for introgression of Aflatoxin resistance in Maize

➤ 400 BC1 genotyped and about 15% selected for recombination

➤ MSU x CIMMYT bi-parental populations in field trials 2018

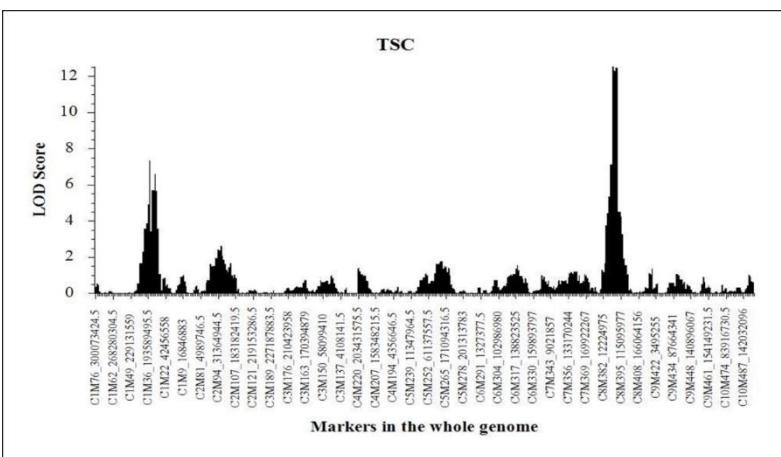

Genome-Wide Analysis of Tar Spot Complex Resistance in Maize Using Genotyping-by-Sequencing SNPs and Whole-Genome Prediction

Shiliang Cao, Alexander Loladze, Yibing Yuan, Yongsheng Wu, Ao Zhang, Jiafa Chen, Gordon Huestis, Jingsheng Cao, Vijay Chaikam, Michael Olsen, Boddupalli M. Prasanna, Felix San Vicente*, and Xuecai Zhang*

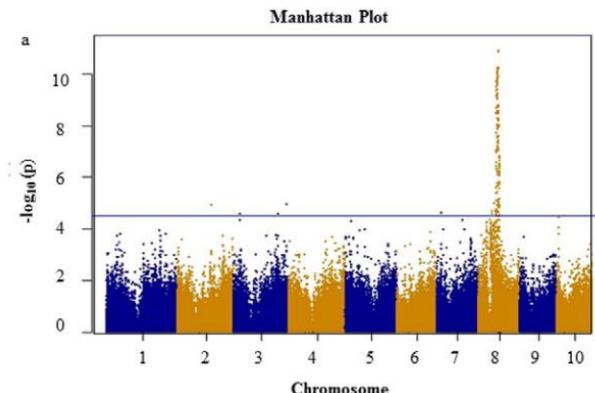

Tar spot complex

Mapping

GWAS

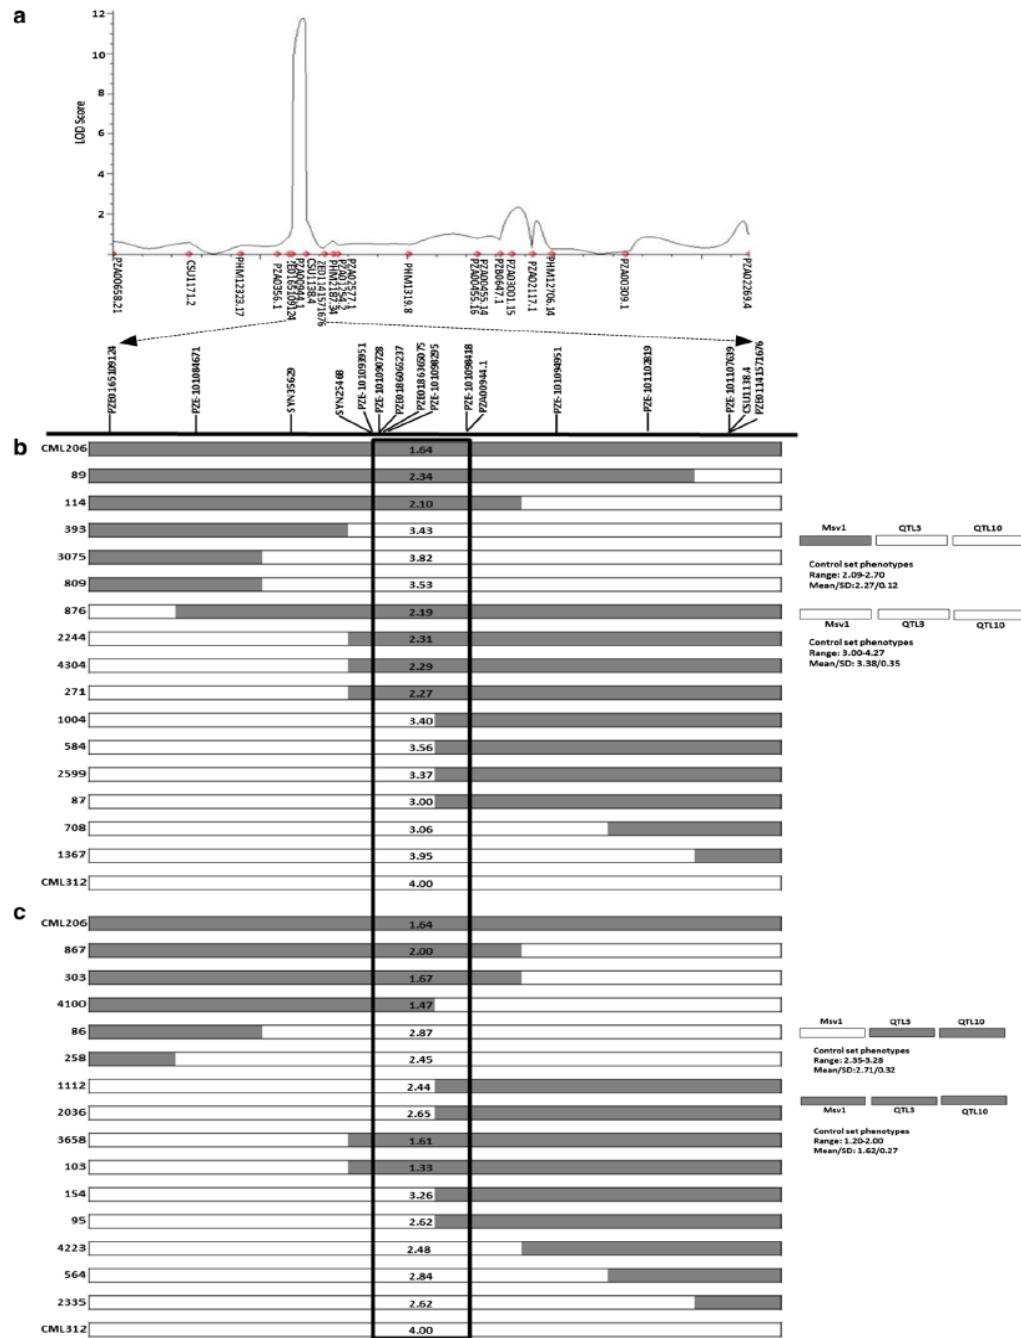

GS

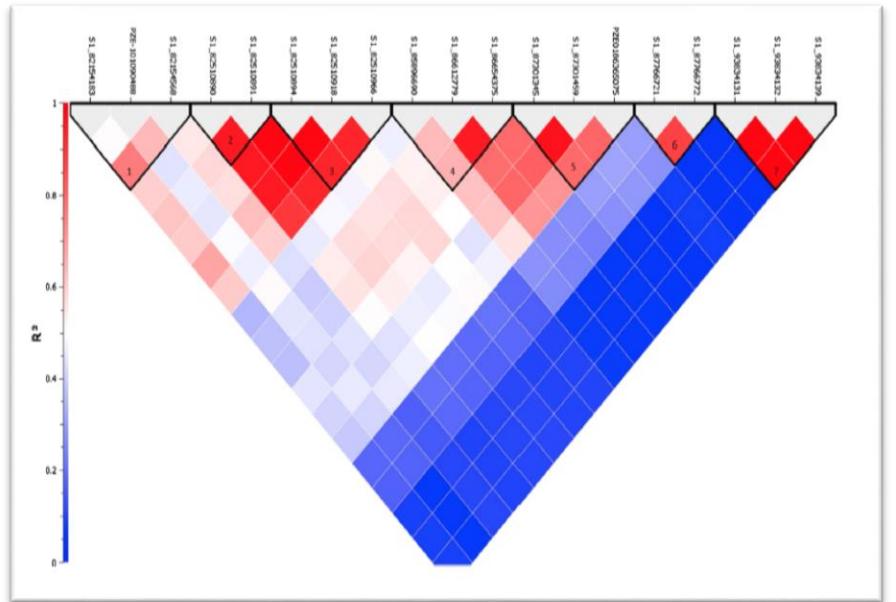

Fine mapping *Msv1* locus for resistance to Maize streak virus in Africa

Followed a QTL isogenic recombinant (QIR) strategy to fine map to a genetic interval of 0.87 cM

Production markers for *Msv1*

- ❑ 0.87 cM ~7Mb physical distance
 - ❑ Validation confirmed 94% accuracy for selection with favorable haplotype
 - ❑ >50000 lines screened with *Msv1* since 2015

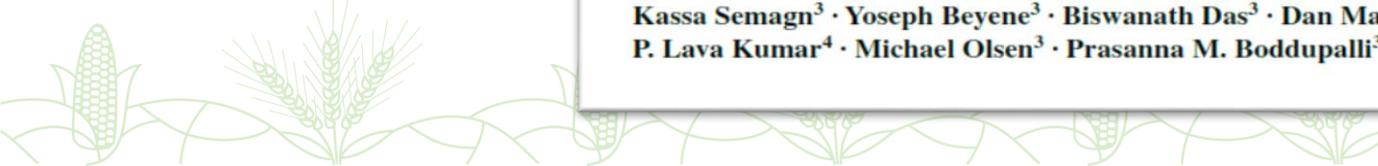

Theor Appl Genet
DOI 10.1007/s00122-015-2551-8

ORIGINAL PAPER

Fine mapping of *Msv1*, a major QTL for resistance to Maize Streak Virus leads to development of production markers for breeding pipelines

ORIGINAL ARTICLE

Genome-wide association and genomic prediction of resistance to maize lethal necrosis disease in tropical maize germplasm

Manje Gowda¹ · Biswanath Das¹ · Dan Makumbi¹ · Raman Babu² · Kassa Semagn¹ · George Mahuku¹ · Michael S. Olsen¹ · Jumbo M. Bright¹ · Yoseph Beyene¹ · Boddupalli M. Prasanna¹

Improved MLN tolerance of elite stress tolerant lines: CML442

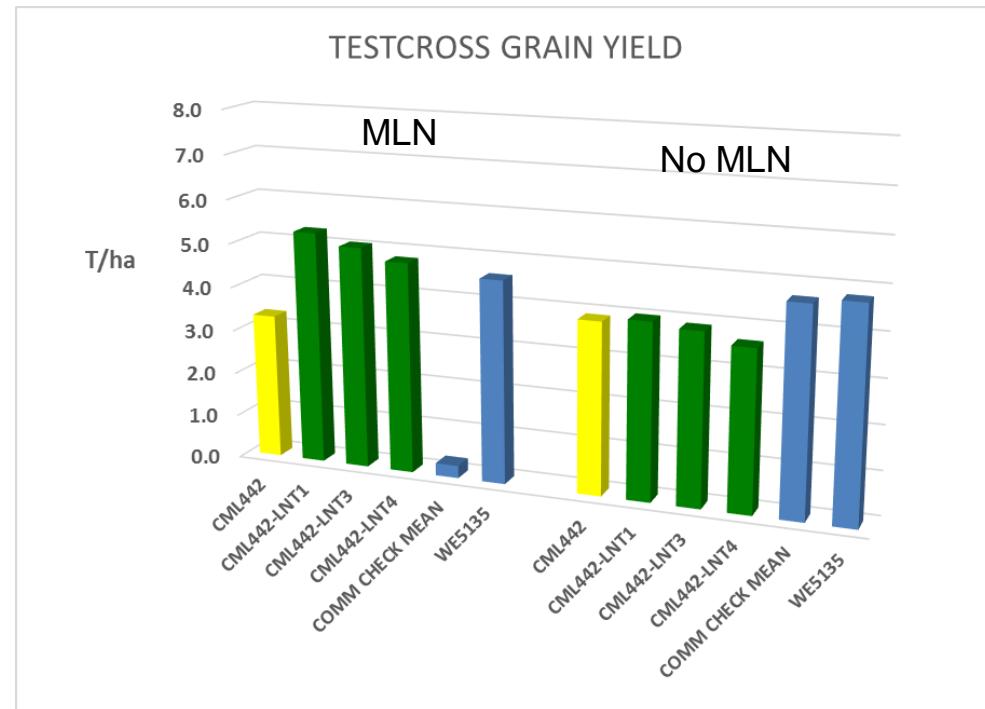

CML442*5/CLWN270

CML442

1.8 t/ha testcross yield increase
under severe MLN pressure

Yield parity in absence of MLN

Improved MLN tolerance of elite stress tolerant lines: CML539

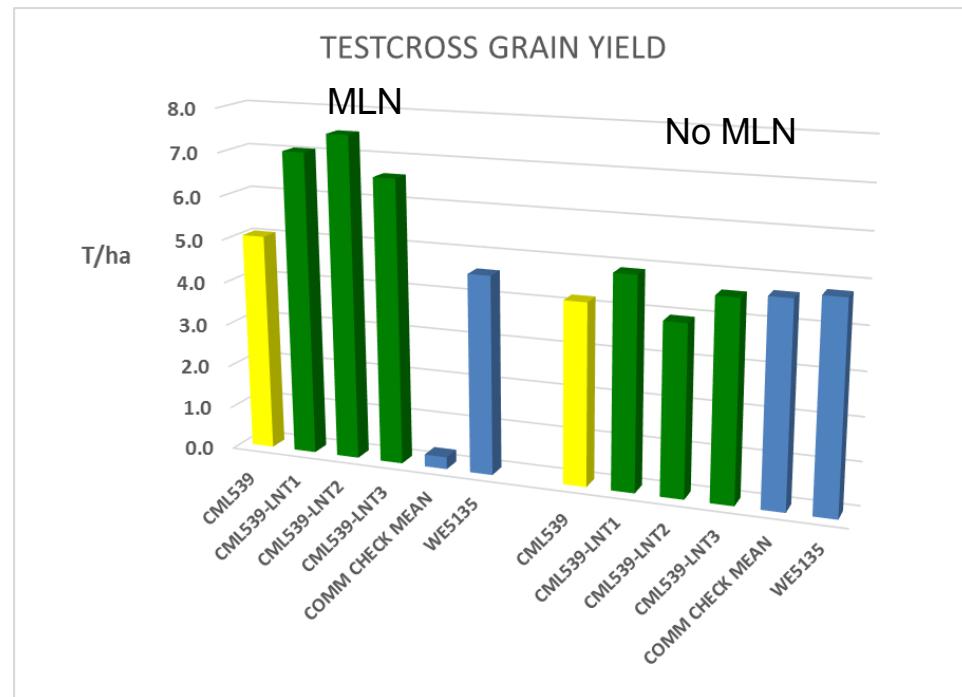

CML539*5/DTPYF46

CML539

2.0 t/ha testcross yield
increase under severe MLN
pressure

Yield parity in absence of MLN

Improved MLN tolerance of elite stress tolerant lines: CML444

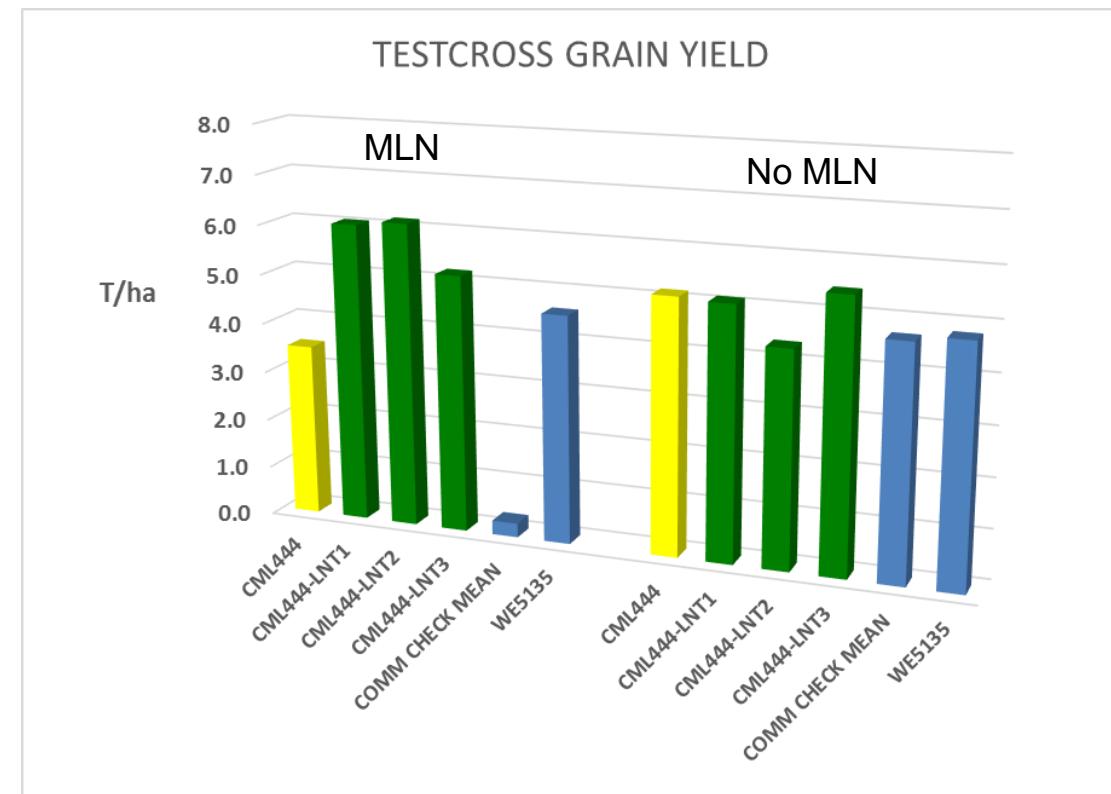

CML444*5/CML494

CML444

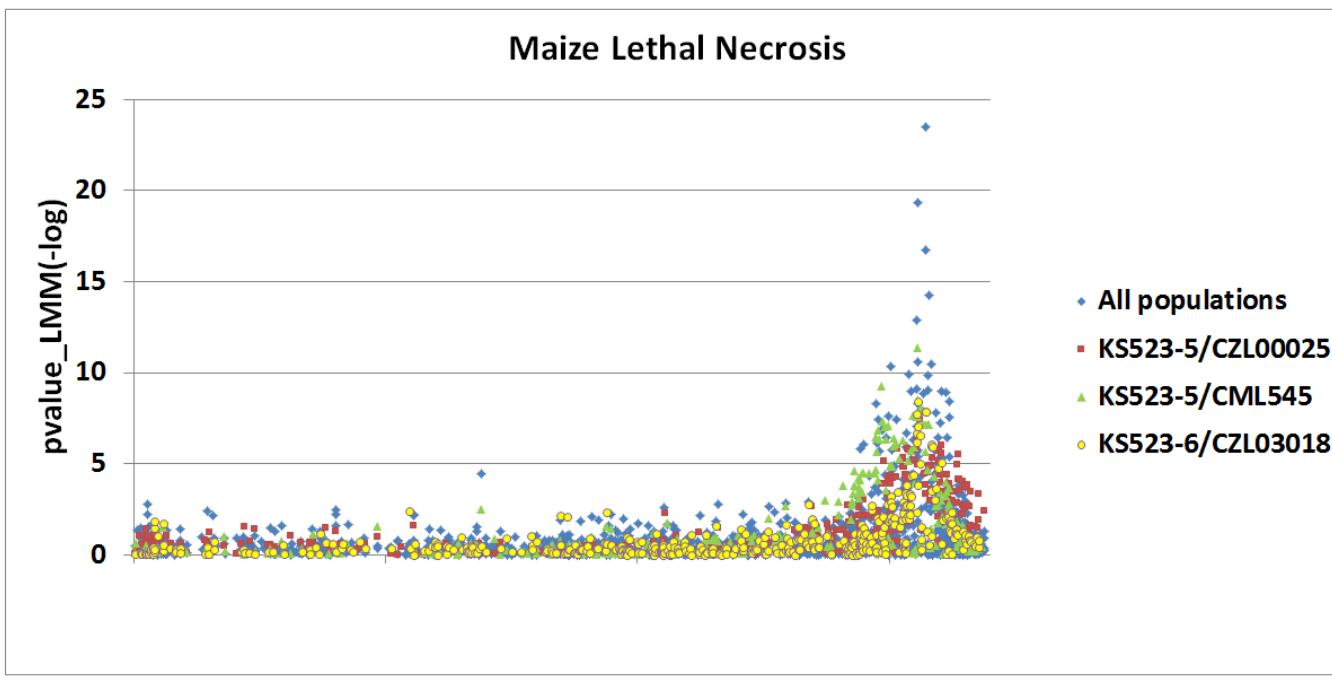

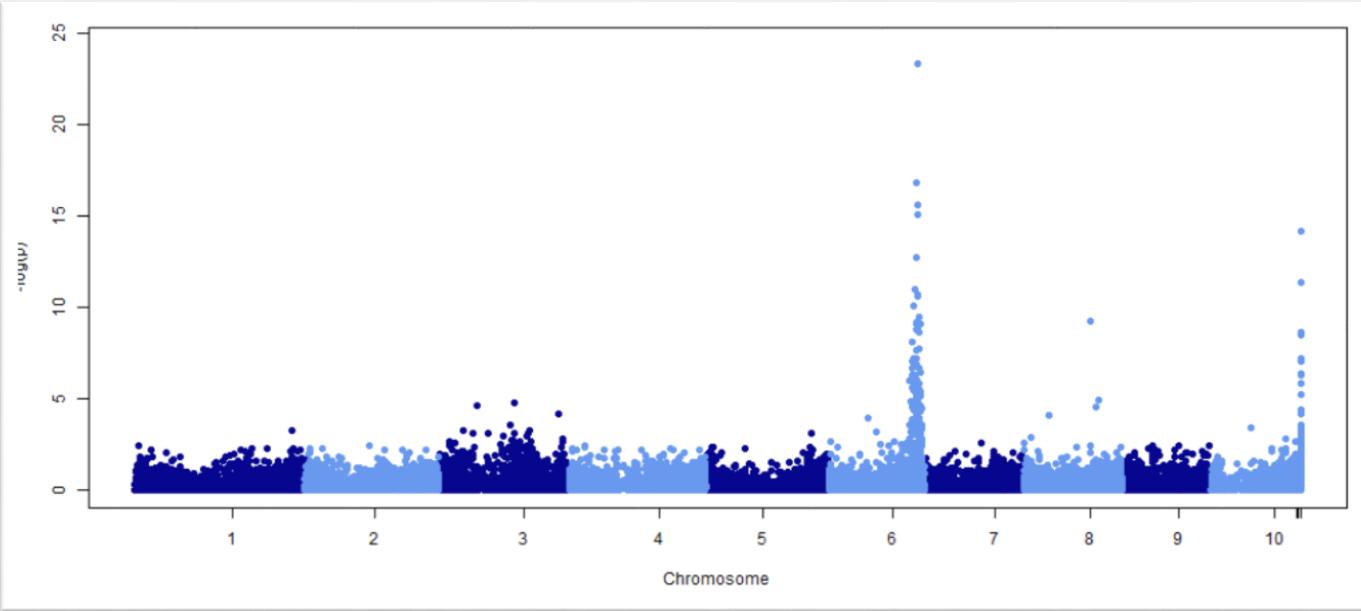

2.3 t/ha testcross yield increase under severe MLN pressure

Yield parity in absence of MLN

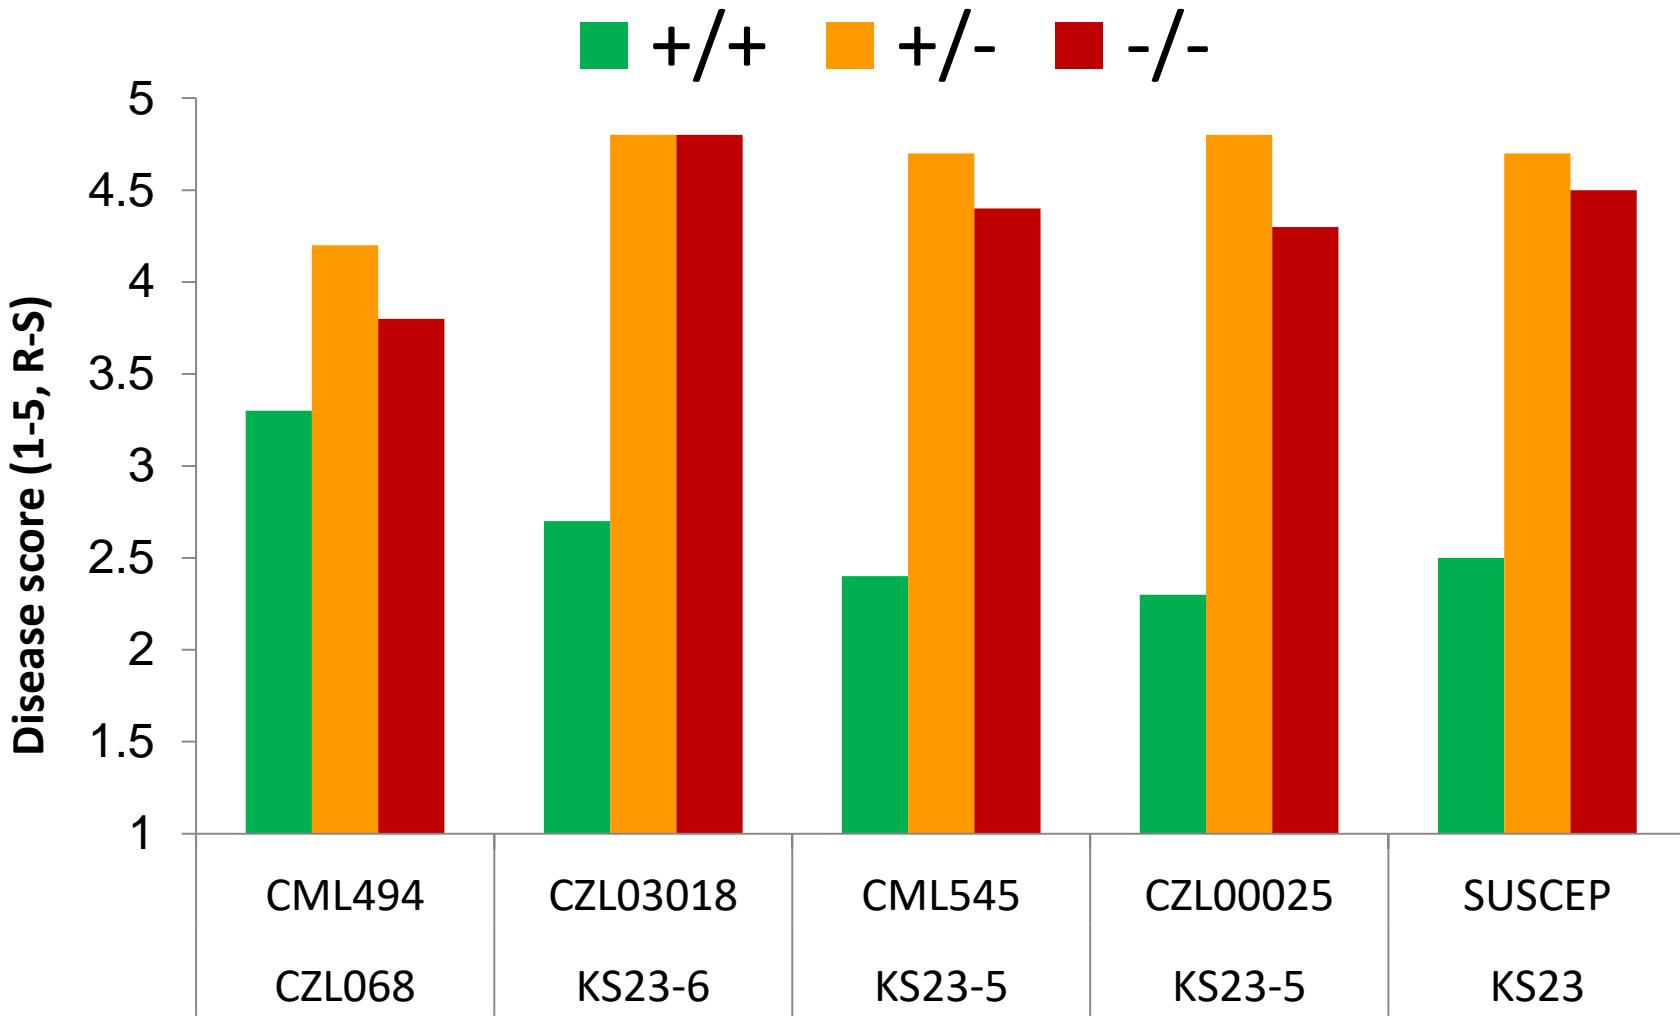

KS23 MLN QTL

- Modified QTL seq method
- Consistent detection in three populations

Contribution of MLN_R Locus to Resistance Against MLN

Parents in cross (KS23 resistant)

KS23 MLN haplotype deployment

- Six marker haplotype identified for HTPG
- 40 enriched breeding populations to delivered to ESA line development team
- 19 MABC projects at BC2 or BC3 stage
- >10,000 F4 and DH lines being screened currently

Marker Deployment Strategy: Africa

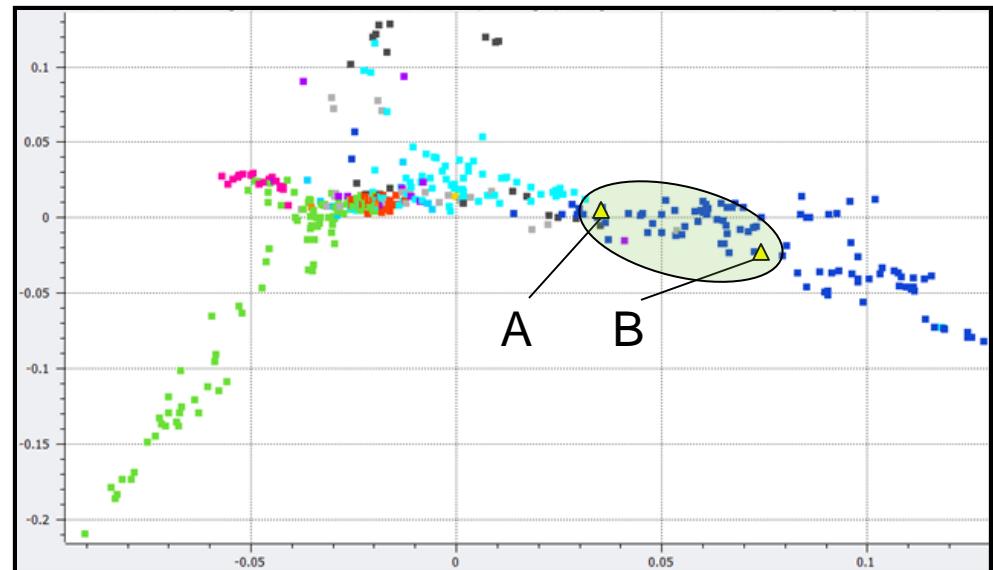

Genome-wide selection strategies

Training set development

- Windheusen et al. 2013:
 - ...emphasizing the need (for) larger training sets with strong genetic relationship to the validation set.
- Endelman et al. 2013:
 - ...the training population must be expanded beyond the full-sib family under selection, using close relatives of the parents as a source of prediction accuracy.
- Jacobsen et al. 2014:
 - ▶ GCA model – half-sib populations involving A and B
 - ▶ Gain from prediction = 68-76% of phenotypic selection at much lower cost

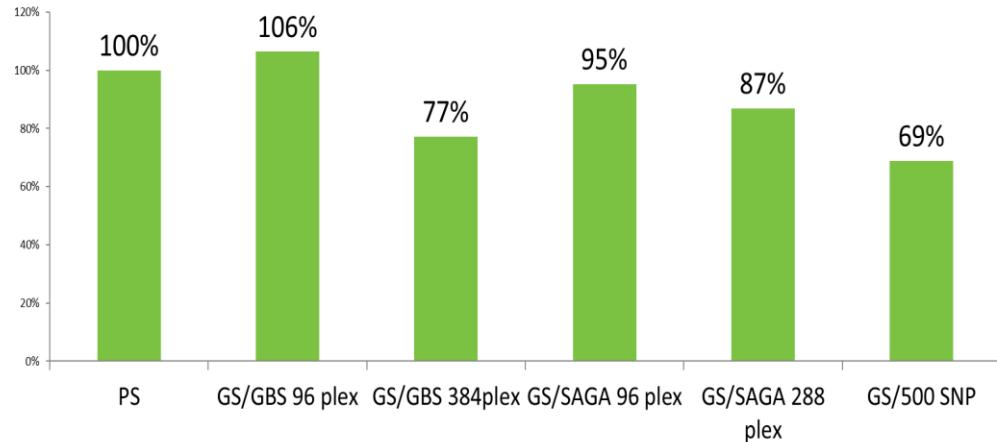

Prediction of untested DH lines

Phase 1

- Phenotype half / predict half
- FS and FS/HS prediction

Operational cost comparison
